

# Reef Safe<sup>®</sup> BY TROPICAL SEAS

## Did you Know?

We have plant-derived packaging several years, we finally located

been researching bio-resins for our for the past and in mid-2014, a source!

After several test trials, we found a 100% bio based HDPE resin made from plant-based feedstock that is a renewable alternative to petrochemical based HDPE resins.

Since it uses 90% less energy and emits 75% less greenhouse gases when processing, this 100% bio based HDPE packaging has a negative carbon footprint from harvest to production here at Tropical Seas. Please recycle through your normal recycling program.

In March 2015, we received sample bottles that were immediately filled with our Biodegradable Reef Safe Sunscreen formulas for stability studies, which passed stability in December.

Bio-Resin bottles were ordered in December for January 2016 delivery, so watch for the new bottles to start arriving in stores by mid March 2016!

**How to tell:  
Look on the bottom of the bottle.**
